

Objective Connect for Local Government

When your council needs to collaborate with anyone, securely.

The ultimate solution when you are working with outsourced service providers, developers, citizens or your mobile workforce.

COUNCIL AND DEMOCRACY

HR Onboarding and Remote Working

As Objective Connect can be accessed anywhere on any device, councils can take full advantage of the ability to support remote working and mobilise the workforce. Electronically share employment contracts and OHS forms with new starters, ensuring the latest forms are used and the completed documents are automatically stored in your EDRMS. Share documents with those on maternity and paternity leave, support internal and external communication and much more.

Contracts | 2-step verification | Online edit | Mobile access

Distribution of Committee Papers

Electronically distribute committee agendas, minutes, financials, plans and more via Objective Connect. Even if the committee members are outside of your organisation, all participants can instantly have the latest documents sent to any device. Use Tasks for the approval of minutes, Comments for group discussion and our new Annotations feature so committee members can make private margin notes.

Electronic distribution | Instant updates | Comments | Annotations

Civil Assets Maintenance

Remove the need for multiple systems to manage the records relating to the assets maintained by your council. Share asset details, photos, plans and more directly from your EDRMS with your asset inspection team. A workspace synchronised from your EDRMS will ensure a single source-of-truth is maintained for all of your asset information.

Single source-of-truth | Mobile access | Incident uploads

Compliance Evaluations

If your compliance team is on the road, share a container directly from your EDRMS. Using Objective Connect for Mobile, a compliance officer can have all of the relevant information in the palm of their hand. Any photos or videos taken can be instantly uploaded and saved in the correct container within your EDRMS.

Share complete cases | Mobile access | Evidence uploads

Risk and Liability

Due to the range of facilities under management by councils, the ability to manage risk with shared assets such as risk registers, compliance reports and OH&S information is key. Create workspaces whenever a third party is involved in mitigating risk or when claims are made.

OH&S claims | Risk registers | Compliance reports

Contract, Tendering and Procurement Management

Engaging with third-party service providers is an everyday occurrence for councils. Objective Connect workspaces can be utilised to create a 'common platform' between your organisation and the third-party provider. Objective Connect will ensure that everyone is always viewing the latest contract – a common issue when relying on email. It will also support tendering and procurement processes, providing a single source of truth to manage every third-party service provider. The Workspace Record will additionally provide deep insight into who did what and when.

Common platform | Third-party providers | Two-way flow | Who did what, when

HEALTH, SOCIAL CARE AND WELLBEING

Health and Social Care

Councils often coordinate the multi-agency response to social care and welfare issues within a community. Objective Connect can be used to bring disparate entities such as health providers, police, child welfare and other supporting agencies together, to collaborate on extremely sensitive personal data relating to domestic violence, truancy and the provision of residential care.

Agency collaboration | Sensitive content | Just-in-time notifications

Childcare

Many childcare facilities lack the systems required to maintain detailed client records. Create a permanent workspace where all client records can be stored and securely accessed by nurseries and childcare teams. The Online Edit function with Microsoft 365 enables the editing of documents in the cloud, without the need to download.

Outsourced records | Client and employee | Browser access | Edit online

Legal Transmittal of Case Files

Depending on the matter, the number of documents within a case file can easily be in the hundreds. Use Objective Connect to securely send an entire case file, including video and audio, in a single click. Use the 'Preview Only' feature to share your most sensitive information, when you trust the person but not the machine they are working on.

Large volumes | Large files | Preview only | Full audit

ENVIRONMENT

Emergency Planning and Response

Objective Connect can be used during each key phase – Planning, Response and Recovery. The capacity to gather accurate information from multiple sources, maintain an up-to-the-minute emergency plan, and the ability to share information with an ever-expanding pool of responders during a crisis will deliver the best possible outcomes for the community.

Distribute plans | Real-time access | Coordinate response | Manage recovery

Environment Guidance and Advice

Objective Connect is an ideal solution for environmental research. Engage your global research partners by simply creating a Workspace to share all of your key data, results, published studies and more. Objective Connect is also an effective publication method when sharing research findings with the wider community.

Research partners | Share key data | Publish findings

Waste Management

A top priority for every council is how to minimise waste and maximise sustainability. From coordinating small local initiatives such as volunteer-run natural area regeneration, to cross-government recycling projects, Objective Connect is an ideal solution for the sharing of content and the distribution of plans.

Volunteer programmes | Agency programmes | Plan publication

PLANNING AND DEVELOPMENT

Planning Applications

Remove the need for paper during the planning application process. Digitally exchange documents and collate feedback in a single location. Everything is time stamped and immediately stored as a record in your EDRMS.

[Direct from EDRMS](#) | [Time stamped](#) | [Retained in EDRMS](#) | [Capture responses](#)

City Planning and Assessment

A city plan requires input from multiple agencies and community stakeholders, each having input to confidential information. Create workspaces where you control who has access to content, for how long and who else they can share the information with.

[Stakeholder management](#) | [Access control](#) | [Time limited](#) | [Sensitive](#)

Property Delivery Group

Make life easier for your project managers. Create a workspace to manage any project requiring third-party input. Add and remove participants and control their abilities. Ensure that the team always has the latest information published from the EDRMS and every version update is captured. The Workspace record will provide a complete overview of all activity, including a complete list of all comments and the status of every task.

[Manage any project](#) | [Comments](#) | [Task allocation](#) | [Preview only](#)

Building Inspections

On-site building inspections are a core deliverable for councils, with many completed by third-party providers. Workspaces, including original plans and plans marked up using Objective Trapeze, can be provided to all inspectors. The information can be viewed via a browser or on a mobile device using Objective Connect for Mobile. If proof-of-work is required, utilise the two-way flow of information to collect photos and plans that have been annotated while on site.

[Share complete cases](#) | [Mobile access](#) | [Evidence uploads](#)

LEISURE

Event Applications

Major events often require the coordination of many outside parties. Objective Connect can be used to bring all stakeholders together – from roads to police, to members of the community, everyone involved can have a single location to share information and exchange ideas.

[Application management](#) | [Volunteer coordination](#) | [Mobile access](#)

Facilities Management

Councils manage a range of facilities from Public Pools to Community Centres. Objective Connect can provide access to key facility information stored in your EDRMS - directly with the team on the ground. From site plans to staff rotas, your content can be accessible to the team who need it most.
